Plastic sheet connection for waterproofing - comprises facing edges with T-shaped sections put between them.  
C86-010839

Two sheets of thermoplastic material are located with their edges facing each other. Two connecting pieces, for the surface and the back, with T-shaped sections, are put between the two edges. They are fused by ultrasonic wave pressure, making the two sheets connect.

USE - Plastic waterproof sheets for roof, etc., can be used effectively, without requiring a margin for attachment. Operability is improved. Also no special skill is required for the work. (3pp Dwg.No.0/3)
